

Hands-Free Imaging Q&A

During the webinar, the following questions related to radiation safety were asked. Please email info@radiationsafety.ca if you wish to discuss this further or any have any other follow up question arising from the presentation.

Q: Do we have federal dose limits for each animal in Canada?

A: No. The decision to recommend procedures which result in doses of ionizing in radiation for humans or for animals is made by the practitioner in consultation with the patient, guardian, or owner as relevant and are not subject to regulatory limit. Also note, x-rays under 1MeV are regulated by each province or territory, or by the Canada Labour Code for federally-regulated workplaces.
